Crash-Course in Contributing to Open Source Projects

(with some specific instructions
to sklearn)

Andreas Müller

Environment

- If you don't have a working python installation, install anaconda.
- If you don't want to install the scikit-learn development version in your main environment, create a separate environment (with conda or virtualenv):

```
conda create -n sklearndev numpy scipy matplotlib  
            pytest sphinx cython ipykernel sphinxgallery  
source activate sklearndev
```

Fork sklearn on github

<https://github.com/scikit-learn/scikit-learn>

The screenshot shows the GitHub repository page for `scikit-learn / scikit-learn`. The repository is described as "machine learning In Python" with a link to <http://scikit-learn.org>. It has 21,709 commits, 17 branches, 80 releases, 801 contributors, and is licensed under BSD-3-Clause. The 'Fork' button is circled in red, indicating the next step in the process. Below the repository information, a table lists recent commits and their associated files.

Commit	Files	Time
zorroblue committed with agramfort Added check_X_y to lasso_stability_path() (#7534)		Latest commit 8c7ab17 3 hours ago
[MRG+] Fix bench_rcv1_logreg_convergence.py by adding get_max_square...	benchmarks	25 days ago
Travis: tweak test_script.sh (#8444)	build_tools	8 days ago
Correct figure number + matplotlib 2 (#8483)	doc	a day ago
Correct figure number + matplotlib 2 (#8483)	examples	a day ago
Added check_X_y to lasso_stability_path() (#7534)	sklearn	3 hours ago
coverall added	.coveragerc	3 years ago
MAINT remove .c files from .gitattributes	.gitattributes	3 months ago
Ignore py.test generated .cache folder	.gitignore	11 days ago

Clone the Fork

The screenshot shows the GitHub interface for a forked repository. A green circle highlights the repository name 'amuel / scikit-learn' and the 'Code' button. A red circle highlights the 'Clone or download' button and the 'Clone with SSH' dropdown menu. The dropdown menu shows the option to 'use https' (highlighted in red) and the URL 'git@github.com:amuel/scikit-learn.git'. Below the dropdown menu is a 'Download ZIP' button. The repository statistics show 21,555 commits, 275 branches, 43 releases, and 752 contributors. The commit history shows a list of commits with their messages and dates.

This branch is 154 commits behind scikit-learn:master.

TomDLT committed with ogrisel [MRG+1] Add multiplicative-update solver in NMF, with all beta-diverg...

benchmarks MAING make benchmarks scripts Python 3 compatible

build_tools CI report which doc files were likely affected (#8032)

doc [MRG+1] Add multiplicative-update solver in NMF, with all beta-diverg... 3 months ago

examples [MRG+1] Add multiplicative-update solver in NMF, with all beta-diverg... 3 months ago

sklearn [MRG+1] Add multiplicative-update solver in NMF, with all beta-diverg... 3 months ago

If you don't have ssh keys set up, use https!

Add main scikit-learn repo as remote called "upstream":

```
git remote add upstream https://github.com/scikit-learn/scikit-learn.git
```

Build and run tests!

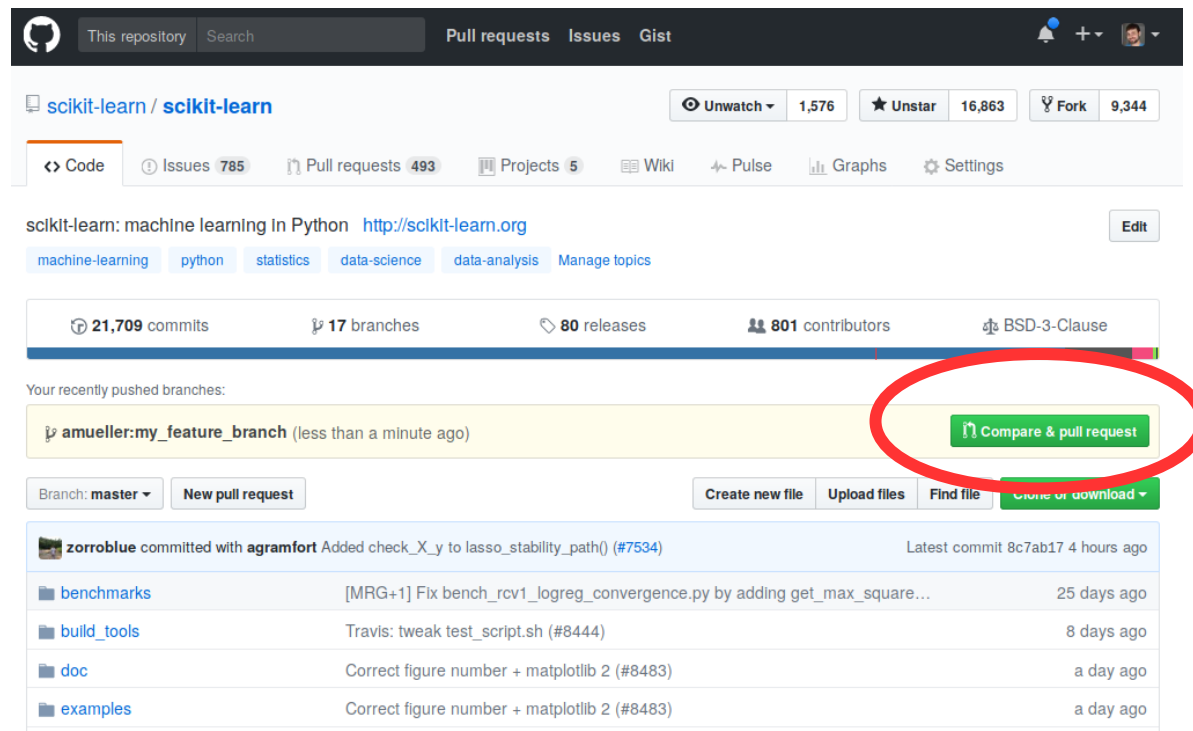

- Easiest way:
`cd scikit-learn`
`pip install -e .`
- Will overwrite existing installations!

Starting on Issues

- Go to <https://github.com/WiMLDS/nyc-2019-scikit-sprint/projects/1>
- Comment on issue saying “I’m working in this”.
- Update local master branch from main sklearn repo (`git pull upstream master`).
- Fetching someone else’s PR:
`git fetch https://github.com/theirusername/reponame.git theirbranch:ourbranch`
- Create feature branch
`git checkout -b <branchname>`
- Commit changes to branch, run tests
`pytest sklearn`
(or individual test files)
- Run flake8 on changed files

Creating a PR

- Push changes to your fork
`git push origin <branchname>`
- Create PR using github UI:

Describing PR

Open a pull request

Create a new pull request by comparing changes across two branches. If you need to, you can also [compare across forks](#).

 base fork: **scikit-learn/scikit-learn** ▼

base: **master** ▼

...

head fork: **amueller/scikit-learn** ▼

compare: **my_feature_branch** ▼

✓ **Able to merge.** These branches can be merged.

Please review the [guidelines for contributing](#) to this repository.

Regression tests

- Are mandatory! For everything (except documentation changes)!
- Make sure continuous integration passes:

The screenshot displays the GitHub Actions status bar for a pull request. It features a green checkmark icon on the left. The main status is "All checks have passed" with a link to "Hide all checks". Below this, a list of five checks is shown, each with a green checkmark, a status icon, a name, a description, and a "Details" link. The checks are: "ci/circleci" (Your tests passed on CircleCI), "codecov/patch" (Coverage not affected when comparing 8c7ab17...24afc5f), "codecov/project" (95.48% remains the same compared to 8c7ab17), "continuous-integration/appveyor/pr" (AppVeyor build succeeded), and "continuous-integration/travis-ci/pr" (The Travis CI build passed). At the bottom, there is a green "Squash and merge" button with a dropdown arrow, followed by the text "or view command line instructions."

 **All checks have passed** [Hide all checks](#)
5 successful checks

✓		ci/circleci — Your tests passed on CircleCI	Details
✓		codecov/patch — Coverage not affected when comparing 8c7ab17...24afc5f	Details
✓		codecov/project — 95.48% remains the same compared to 8c7ab17	Details
✓		continuous-integration/appveyor/pr — AppVeyor build succeeded	Details
✓		continuous-integration/travis-ci/pr — The Travis CI build passed	Details

This branch has no conflicts with the base branch
Merging can be performed automatically.

[Squash and merge](#) or view [command line instructions](#).

What's next?

- Wait for reviews (be patient).
- Address review comments in the same branch.
- Pushing to your fork will update the PR
- Reviewers will “approve” PR or change title to [MRG + 1]
- You need two approvals for a merge.

Finding Issues

- Check “need contributor”, “easy” and “sprint” issues.
- Something unclear in the docs? Fix it!
- Can’t fix something that’s unclear? Open an issue!
- Problem that you keep running into: Open an issue!
- Find stalled PRs (the author didn’t address reviews for $\sim >1$ month) and continue them!
- <https://github.com/WiMLDS/nyc-2019-scikit-sprint/projects/1>
-

Reviewing

- You can review PRs and issues!
- Some bugs are not confirmed. See if you can confirm them and under what conditions?
- You can review documentation PRs for language and whether they are clear to you.
- You can review code changes on whether they address the issue (might be a bit tricky).
- Don't be afraid to ask clarifying questions!

Final words

- Pick something TRIVIALY SIMPLE as the first contribution.
- You can do the cool stuff afterwards!
- There might be interesting issues that are not appropriately tagged.

Thank you for your help!
Enjoy!
